DATA TRANSFORMATION SOLUTIONS · SINCE 2011

DM FOR POWER

From the utility to the server. Every watt, one DM.

Utility service, switchgear, generators and transfer switches, UPS and batteries, PDUs, rack PDUs and each server's power supplies, live in one console, with the load every layer would carry if one side were lost.

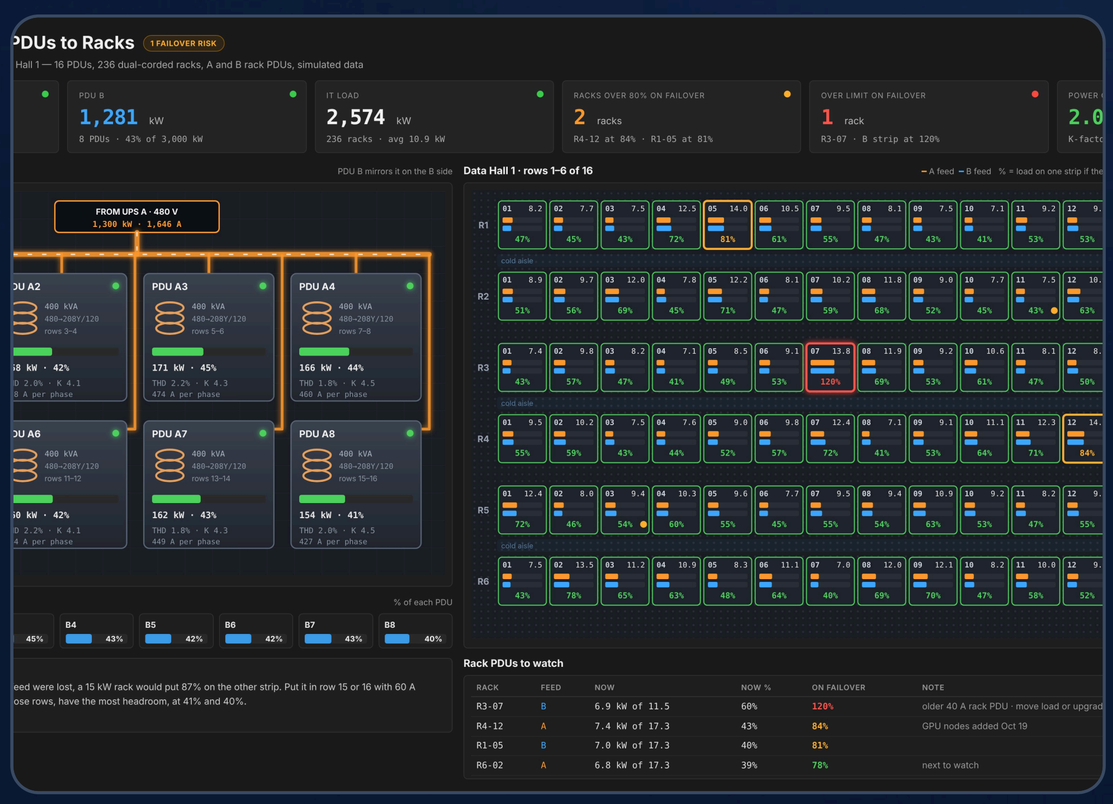

Switchgear room plan: utility to rack.

UPS, 2N: both UPS lineups with their lithium-ion battery cabinets.

Data hall power, every rack on failover.

Server PTS1: both power supplies, from the BMC.
